

BCC Presort

Data Processing Software

Scalable production mail solutions.

BCC Software production mailing solutions offer address correction, database management, duplicate record detection and advanced postal sorts. BCC Presort specializes in sorting flat sized pieces and supports the most complex mailings, including many optional procedure agreements and niche classifications. Production mailers who are very familiar with postal regulations and operate in a distributed processing environment gain needed speed and flexibility. Everything is backed by the personal, high-quality support from BCC Software mailing industry experts.

High-Volume Mail Preparation

BCC Presort is an integral part of large commercial printer workflows and those seeking razor-thin differences in gross margins. Use BCC Presort to improve your operations and to receive the maximum possible postage savings. Bring your mail into production more quickly by setting up just a few parameters to run a job. Take advantage of superior mailing expertise for worry-free product support and service.

BENEFITS

- » Achieve the best possible postage discounts.
- » Approved by the USPS® so presorting is in full compliance with USPS regulations.
- » Meet unique operational requirements.
- » Bring mail into production more efficiently.
- » Gain control, speed and flexibility.
- » Save time, save money, and improve efficiency.

Features

- » PAVE™ Gold, MAC Batch™ and ZAP certified presort software helps advanced mailing operations produce mailings that both meet USPS regulations and leverage optional procedure agreements and niche classifications.
- » Offers flexibility to customize mailings to include many types of sortation options such as palletization, co-mail, multiple entry points and manifest mailings.
- » Includes support for many exotic preparations, plus drop shipping and Carrier Route sortation for maximum work-sharing discounts.
- » Supports Intelligent Mail® with the necessary output for printing as well as electronic document submission through Mail.dat®.
- » Create Mail.dat files that support the transmission of Informed Delivery® campaign information.
- » Create and customize output files for Address, Pallet, Sack/Tray, and Package label creation to meet your needs.
- » Easily integrates with BCC Ignite and other systems or products to improve efficiency.
- » Can be scaled to meet your company needs from a standalone installation to server-client deployments on different platforms.

Features (continued)

BCC PRESORT VIEWS

- » Makes processing database files easy for new and existing users.
- » Presents easy-to-use, graphical screens with menus, wizards, toolbars, and online help to save time and prevent setup errors.
- » Set up parts of your job automatically and verify your job setup as you go, so it catches and corrects most errors quickly.

LABEL STUDIO (SOLD SEPARATELY)

Label Studio takes your input files and outputs customized labels. Use this design tool to produce address, trays, sack and pallet labels that meet postal industry standards. Label Studio supports printing to many types of printers including Windows-based printer drivers, Inkjet printers, PLC Data Stream Printer drivers and Generic Text.

BCC Software Service and Support

Highly personalized support and high-quality service are available to help you optimize your production process, troubleshoot and resolve issues, as well as deliver mailing industry expertise directly to your mailing organization.

MAILING INDUSTRY EXPERTISE

BCC Software is pleased to offer personal support for all your mailing software needs today and into the future. Our exceptional service and technical expertise help our customers easily and quickly achieve success with their mailing solutions. Our skilled, knowledgeable professionals understand the complexities of address management and USPS regulations.

EXPERTS FROM DATA TO DELIVERY

BCC Software has been the industry leader in postal presort software and address quality solutions for over 40 years. Our data-driven solutions enhance direct communications anywhere along the workflow spectrum.

Optional Add-Ons

ELECTRONIC VERIFICATION SYSTEM (EVS)

Prepare parcel mailings with IMpb compliant shipping labels, submit a single Shipping Services File (.manifest) for Tracking and Postage Payment, and manage quality across all mailings with a monthly reconciliation process.

AIR FREIGHT BOXES (AFB)

You can prepare, label, pay, and transport AFB mailings and use induction to identify the AFB as a container to expedite delivery of time-sensitive materials.

PRIORITY MAIL

Priority Mail® (PM) class offers expedited service (1-3 business day domestic delivery, not guaranteed). BCC Presort currently supports Priority Mail parcel jobs.

MIXED CLASS CO-MAIL

Ideal for large commercial printers, co-minglers and logistics providers to the mailing industry, to combine volumes from periodical flats and standard flats and BPM into a single mailing to maximize postage discounts and minimize labor costs.

POLYBAGS

Facilitates the creation of polybags containing multiple periodicals, each of which can be treated as a single flat—potentially resulting in large savings on piece charges.
